⍰ LOGIC TO LAYERS

A Frontend Design & Innovation Challenge

⍰ About the Event

Logic to Layers is a dynamic frontend design competition that takes participants through the complete journey of building a digital product—from understanding a problem to presenting a fully designed solution.

This event is crafted to test not just design skills, but also **analytical thinking, innovation, user experience, and presentation abilities**. Participants will work in real-time using Figma to transform ideas into interactive prototypes and compelling product stories.

⍰ Objective

To simulate a **real-world product design lifecycle**, encouraging participants to:

Think critically

Design creatively

Build logically

Present confidently

⍰ Competition Flow

The event is structured into four progressive rounds:

- ⍰ ***Round 1: DECODE — Crack the Problem***

“Understand deeply before you create.”

Participants analyze the given problem and build a strong foundation of understanding

Key Focus:

Problem breakdown & interpretation

Target user identification

Flowchart / user journey mapping

Low-fidelity wireframes

Bonus Consideration:
Participants who support their problem understanding or solutions with relevant research papers or credible references will receive additional weightage for depth and authenticity.
This demonstrates analytical thinking and real-world validation of the proposed design approach.

Outcome:

A **clear problem blueprint** with logical flow and defined solution areas.

- ***⍰ Round 2: DESIGN — Build the Solution Core***

“Turn ideas into meaningful features.”

Participants develop innovative features that directly address the problem.

Key Focus:

Core feature identification (2–3 features)

Purpose & impact of each feature

Feature-based screen design

Outcome: A **feature-driven solution concept** showcasing functionality and innovation.

- ## ⍰ *Round 3: DEVELOP — Build the Experience (Elimination Round)*

“Make your solution work in reality.”

Participants transform their ideas into a complete frontend experience.

Key Focus:

High-fidelity UI/UX design

Screen connections & prototype building

Animations and interactions

Logical problem-solving through design

Outcome:

A **fully functional Figma prototype** demonstrating usability and flow.

⍰ *Top-performing teams advance to the final round.*

- ## ⍰ *Round 4: DELIVER — Pitch the Vision*

“Sell your solution with impact.”

Participants present their product as a real-world solution.

Key Focus:

Product presentation (slides + prototype)

Storytelling (problem → solution → impact)

Strategic thinking and clarity

Mandatory Questions:

What makes your solution better than existing apps?

How will you scale this product?

What if your main feature fails?

Outcome:

A **convincing product pitch** with strong vision and execution.

- ⍰ **Rules & Guidelines**

Participants must use **Figma** for all design and prototyping tasks.

All work must be **original and created during the competition**.

Time limits for each round must be strictly followed.

Teams/participants must **present within the allotted time**.

Any form of plagiarism or unfair means will lead to disqualification.

Judges' decisions will be **final and binding**.

⍰ Evaluation Criteria

Participants will be judged on:

Problem understanding & logic

Innovation & creativity

UI/UX design quality

Functionality & interaction

Presentation & communication

- ## ⍰ Closing Note

Logic to Layers is more than a competition—it is an opportunity to **think, create, and innovate under real-world constraints**.

We encourage all participants to push boundaries, explore bold ideas, and transform logic into impactful design layers.

⍰ *Wishing all participants the very best!*

Create. Innovate. Impress. ⍰
